

Livery Manager

How to use

Always install the product first, before trying to install liveries!

I have downloaded a livery:

Unzip the livery and place the folder in the “downloads” folder of the livery manager. Run the livery manager and select the liveries you have downloaded. Make sure you select the correct Flight Sim with corresponding path.

VISTA users: Make sure the path is correct (FSX or FS9 path)

I have not yet downloaded a livery:

Run the livery manager. On top you see three buttons. The middle one is for searching liveries online. The manager will look into the CLS database for the liveries. Select the one you want and press load. Give it some time and it will install automatically. Be sure that before you do this, select the correct Flight Sim with corresponding path.

VISTA users: Make sure the path is correct (FSX or FS9 path)
